EDUCATION

Northeastern University, Khoury College of Computer Sciences, Boston, MA Sept. 2023 – Present
Bachelor of Science in Computer Science with Systems Concentration Expected May 2027
Master of Science in Computer Science through the PlusOne Program Expected May 2028
GPA: 3.6/4.0, Dean's List, Study Abroad in London (Spring 2024), SWE Australia Dialogue (Summer 2026)
Relevant Coursework: Web Development, Object-Oriented Design, Algorithms, Programming in C++, Computer Systems, Fundamentals of Software Engineering, Advanced Software Engineering, Theory of Computation, Foundations of Data Science

EXPERIENCE

Backend Engineer Co-op, *ERGO NEXT Insurance*, Waltham, MA Jan. 2026 – May 2026

- Designed cross-platform navigation links between two internal dashboards, coordinating across backend and frontend teams; updated **REST APIs** and deployed via **Jenkins**, recognized by the agents' team for improving productivity.
- Migrated a daily batch billing report into an on-demand REST API, enabling agents to generate and download date-filtered reports; implemented schema changes via **Liquibase** and integrated with existing job infrastructure.
- Extended a Kotlin-based data importer to support three production databases and added entity ID-based customer lookup, streamlining testing workflows across the backend engineering team.
- Resolved a multi-business classification bug affecting customers with staged accounts, uncovering the root cause through **MySQL** queries and **Redash** visualizations, shipping an API fix to one of the application's highest-traffic endpoints.

Tech Lead and Software Web Developer, *Northeastern Electric Racing*, Boston, MA Nov. 2024 – Present

- Shipped quick fixes and organized bug reports and feature requests for 400+ engineers by leading the maintenance team for FinishLine, a **React** and **TypeScript** full-stack project management dashboard built on **Node.js** and **Express**.
- Eliminated hours of manual rule-tracking and ensured 100% competition compliance by architecting a rules management system to parse 100+ page rule documents into tracked tasks using **Prisma** ORM, deployed through **Docker**.
- Maintained code quality standards across 10+ developers through **GitHub** code reviews and **Postman** API testing.
- Shortened feedback cycles for critical car part development through developing features for an interactive CAD part review dashboard, allowing engineers to upload designs, request changes, and annotate feedback.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, Python, Kotlin, HTML/CSS, SQL, C++
Technologies: React, Next.js, Node.js, Express.js, Bootstrap, Tailwind, PySide6, Prisma
Tools and Platforms: Git, Liquibase, JUnit, Vercel, Docker, PostgreSQL, MongoDB, Redash, Jira, Postman

PROJECT EXPERIENCE

VSCode Extension for Technical Credit Detection May 2026 – Present

- Designed and built a VSCode extension in **TypeScript** that detects Technical Credit, the measurable benefit of deliberate architectural decisions that create long-term advantages, by analyzing Java code against TC design categories and delivering results as interactive CodeLens inline annotations developers can accept or dismiss.
- Engineered the detection pipeline with Tree-sitter Java parsing for syntax extraction, 9 parallel LLM agents for category specific analysis, and comprehensive test suites with positive and negative cases to validate signal detection accuracy.

Network Security Port Scanner June 2025 – Aug. 2025

- Designed an interactive **Python** port scanning interface with **PySide6** featuring real-time progress visualization, sortable results, detailed statistics, and configurable display modes for comprehensive or filtered results.
- Developed a multithreaded scanning engine with configurable timeout settings, robust exception handling, and graceful connection teardown for efficient scanning of user-defined port ranges (1-65535).

3D FPS Unity Game June 2024 – Aug. 2024

- Developed a game from initial concept to final release, architecting character behavior frameworks in **C#** with Finite State Machines to manage pathfinding, collision detection, and animation systems.
- Engineered a **UI/UX** subsystem with interactive menus, configurable settings, and a real-time HUD; implemented event driven architecture for audio/visual feedback and scene progression, ensuring a cohesive and polished player experience.
